## VMI MIXER TIMERS ALTERNATE WIRING (VMI-009 & VMI-010)

### OVERVIEW:

It has been found that many of the Lucks / VMI mixers have different timer wiring connections than expected. Instead of the 11 pin socket type wiring a rectangle plug is found. The 72MM replacement timers (SITEC OEM) have 11 pin "octal" configured pins. To adapt these timers to the Lucks / VMI mixers an 11 pin socket wiring base needs to be added.

New 11 pin Socket Base MEL-091

### WIRING:

The wiring is VERY simply!

All wires match the numbers exactly. IE: Wire#/pin# 1 on the rectangle plug connects to LUG # 1 on the socket base, and so on.

BakeTechPros part number for the 11 pin socket is MEL-091, but they are also available from many other sources, Grainger, Johnstone etc.
